

FOR IMMEDIATE RELEASE

REGIONAL MLS OF FLORIDA PROTECTS MLS DATA WITH SAFEMLSTM

PALM BEACH GARDENS, FL (September 21, 2005) – This past summer, RMLS of Florida began deployment of the SAFEMLSTM solution to their 15,000+ subscribers. RMLS Florida is among many MLS organizations that are taking steps to secure MLS data and protect it from misuse and unauthorized access. Clareity Security staff was on hand to provide education, training and deployment support to RMLS members and staff throughout the transition

RMLS chose Clareity Security and the SAFEMLS solution because of their experience and commitment to the real estate industry. Patty Connor, CEO of RMLS states, "The SAFEMLSTM solution is completely customized to meet the needs of our subscribers – the Real Estate Professional. Clareity Security provides the knowledge and the education required to deploy this new technology successfully – they are truly pioneers in providing security solutions focused on the Real Estate industry".

Membership reaction to the SAFEMLS solution has been extremely positive. Patricia Richardson, Broker, Results Realty, commented, "Fortunately for all REALTORS, RMLS is remaining and/or excelling in the technology field. The latest Security Token, "SAFEMLSTM", made available to REALTORS, is a positive approach to protecting the MLS system and the livelihood of all REALTORS. As a broker of 20 plus years, I applaud Regional MLS for their vision!"

F.F. Chappy Adams, Broker, Illustrated Properties Real Estate, Inc (Top 100 Real Estate Company in U.S.) writes: I am very pleased with the steps taken by Regional MLS to protect our consumers. We, as an industry, have to become aware of the risk of having our customer's personal information fall into the wrong hands. The new SAFEMLSTM Password System will greatly reduce the risk of personal information falling into the wrong hands, by reducing the risk of shared passwords. The SAFEMLSTM also protects us from non-members having access to our information. These are very positive changes to our industry.

The SAFEMLSTM solution facilitates strong authentication by offering both hardware and software tokens, that issue one-time passwords. By requiring something the user has (a token) along with something they know (a user ID and PIN) it reduces the possibility of unauthorized access to the MLS system through shared or stolen passwords. Clareity Security, the leading security consulting firm to the real estate industry, developed SAFEMLSTM with Secure Computing (NASDAQ: SCUR), a global provider of security solutions. SAFEMLSTM provides real estate professionals with an easy-to-use system to safeguard sensitive MLS and real estate-related data and is the first security solution specifically designed to meet the unique needs of real estate companies and MLSs.

The SAFEMLSTM solution is integrated directly into both of RMLS's vendor MLS systems, which include Fidelity's REXplorer and Interealty's MLXchange platforms. In addition, Clareity has facilitated the integration for other third-party applications such as eNeighborhoods' Wyldfyre product and Homestore's Top Producer product.

Controlling access to the MLS, as well as transaction management systems and broker systems, has become increasingly critical because it is no longer simply the listing information that is at risk. MLS systems now include contact management and CRM applications that store personal information about clients and prospects. Furthermore, new federal regulations such as Sarbanes-Oxley and Gramm-Leach-Bliley, and recent state regulations, require that companies take appropriate steps to protect confidential customer data. Regulation in other industries has caused MLS operators and large brokerage firms to recognize the need to improve security standards and best practices.

SAFEMLSTM also provides benefits to brokers, MLSs and third-party vendors because users will have to be authorized to access any system that integrates with SAFEMLSTM. This security system will ensure that users are paying for the services they are accessing, and that MLS operators and MLS vendors are

collecting the service fees to which they are entitled. Brokers can optionally deploy SAFEMLSTM to control access to their company networks using the same tokens after MLS deployment.

For each of its customers, Clarity Security installs and integrates the SAFEMLSTM solution, trains the staff on security administration, provides on-site assistance to guarantee a successful deployment, and offers seminars on security issues. Clarity oversees all aspects of the integration, implementation and training process from start to finish.
